

In the Claims:

- 1.(currently amended) A cleaning composition comprising a multiple emulsion system, wherein said multiple emulsion system comprises two active ingredients separated in said the emulsion system by an oily or aqueous phase, wherein when said emulsion system is in use as a cleaning composition, then the at least two active ingredients previously held in separate phases of said system are brought into contact with each other and react to form different or enhanced active ingredients for use in cleaning compositions.
- 2.(currently amended) A cleaning composition as claimed in claim 1, wherein said multiple emulsion system is of the oil-in-water-in-oil (o/w/o) type or the water-in-oil-in-water (w/o/w) type.
- 3.(currently amended) A cleaning composition as claimed in claim 2, wherein said system is of the (w/o/w) type.
- 4.(currently amended) A cleaning composition as claimed in claim 1, wherein said active ingredients are brought together by a trigger.
- 5.(currently amended) A cleaning composition as claimed in claim 1, wherein the effective stabilisation of said emulsion system is by a particulate moiety.
- 6.(currently amended) A cleaning composition as claimed in claim 5, wherein said moiety is capable of exhibiting more than one degree of hydrophobicity.
- 7.(currently amended) A cleaning composition as claimed in claim 6, wherein said moiety is functionalised silica.

8.(currently amended) A cleaning composition as claimed in claim 6, wherein said moiety is less than 30 nm in mean diameter.

9.(currently amended) A cleaning composition as claimed in claim 1, wherein said active ingredients are moieties which have a positive effect on the performance of the system as a cleaning composition.

10.(currently amended) A cleaning composition as claimed in claim 1, wherein said active ingredients are selected from the group comprising: colour molecules/dyes, bleaches, bleach activators, oxidising agents, reducing agents, enzymes, catalysts, peroxides, acidic moieties, acid-stabilised moieties, alkaline moieties, alkaline-stabilised moieties, chlorites, hypochlorites, monomers, cross-linking agents, foam-forming moieties, de-foaming moieties, surfactants, surfactant precursors, and fragrances/malodour combaters.

11.(currently amended) A cleaning composition as claimed in claim 1, wherein the oily phase of a (w/o/w) emulsion system or the aqueous phase of a (o/w/o) emulsion system comprises an active ingredient as defined in claim 10- selected from the group comprising: colour molecules/dyes, bleaches, bleach activators, oxidising agents, reducing agents, enzymes, catalysts, peroxides, acidic moieties, acid-stabilised moieties, alkaline moieties, alkaline-stabilised moieties, chlorites, hypochlorites, monomers, cross-linking agents, foam-forming moieties, de-foaming moieties, surfactants, surfactant precursors, and fragrances/malodour combaters.

12.(currently amended) A composition as claimed in claim 1 for use in non-cosmetic, household cleaning applications duties.

13.(currently amended) A hard surface cleaning composition comprising a
composition as claimed in claim 1. for use as a hard surface cleaner or a fabric
surface cleaner.

14.(currently amended) A An antimicrobial composition comprising a composition
as claimed in claim 1, wherein said composition is antimicrobial.

15.(original) A composition as claimed in claim 1, wherein two active ingredients are
separated in the emulsion system.

16.(currently amended) Use of a cleaning composition comprising a multiple
emulsion system according to as a cleaning composition, wherein said emulsion
system is defined in claim 1.

17.(original) A method of cleaning a surface, the method comprising the use of a
cleaning composition as claimed in claim 1.

18. (new) A fabric cleaning composition comprising a composition as claimed in
claim 1.
